

OPERATING FLOW / 01

WhatsApp order to final closure

AAPOORTI B CONNECT | Updated 19 September 2026

Current operating guide, including stock, returns, credit, refunds and Admin follow-up.

Retailer / Sales	1. Submit and review demand Check products, quantities, rates and stock. Preserve the full requested demand.
V	
Sales / Purchaser	2. Resolve shortages Available now, wait for full supply, or cancel the balance. Keep replenishment and retailer demand linked. See page 2.
V	
Retailer	3. Accept current confirmation Create the sales order (SO) once. No reply remains a dated Sales follow-up.
V	
Warehouse	4. Recheck and finalize packing Verify quantity and weight. Resolve damage, shortage or scale override before dispatch. See page 3.
V	
Delivery agent	5. Record delivery outcome Report closed shop or item-wise returns with photos. Seller approves the revised bill. See page 4.
V	
Agent / Warehouse	6. Reconcile goods and collection Collect only the approved delivered bill balance. Physically receive and inspect returned goods. See page 5.
V	
Sales / Accounts	7. Reconcile money Apply verified credit; track later/partial collection and verification; process requested refunds. See page 6.
V	
System / Admin	8. Check final completion All linked demand, delivery, goods custody, money and notifications must be resolved. See page 7.
Order Created is not Completed A confirmed SO stays open while any linked obligation remains. Admin can see unresolved cases of every age.	

OPERATING FLOW / 02

Stock shortage & retailer confirmation

Sales owns the retailer decision. Purchaser approval never substitutes for retailer acceptance.

Working example

Retailer requests **60** units. **24** are available and **36** are short. Confirm the available portion and communicate the pending portion separately, according to the chosen fulfilment option.

Offer all three choices

Retailer choice	Available 24	Remaining 36
Available now; balance later	Send confirmation and fulfil after acceptance.	Keep linked pending demand. Confirm after stock becomes available.
Wait for all 60	Hold the available portion for the full-order decision.	Replenish, then send confirmation for the complete quantity.
Available now; cancel balance	Send confirmation for 24.	Record explicit balance cancellation; no later collection for those units.

Replenishment branch

System	Shortage detected Create the draft purchase request and alert Purchaser for approval.
v	
Purchaser	Approve or cancel procurement Approve: record supply decision / expected date and track actual receipt. Cancel: return the demand decision to Sales.
v	
Sales / System	Resolve and release the pending portion Confirm only stock that is received and available. Keep every released portion linked to the original demand.

If the retailer does not respond

Keep **Awaiting Retailer** visible. Sales sets a future follow-up date and note, resends with a new date, or explicitly cancels the unconfirmed portion with a reason. Overdue alerts go to Sales and WhatsApp Admin. There is no automatic cancellation.

Collection boundary

Delivery of 24 creates a bill for 24. The other 36 are collected on their later delivery, if supplied. Cancelling a supplier PO does not silently cancel retailer demand.

OPERATING FLOW / 03

Packing: recheck before override

Warehouse records the facts; Sales resolves commercial changes; the retailer accepts the revised bill.

Warehouse	1. Select Recheck Record actual product quantities, measured weight and missing/damaged reasons. Packing and dispatch stay on hold.
v	
Warehouse / Admin	2. Resolve the measurement issue Recount or reweigh first. A broken scale or out-of-tolerance weight requires WhatsApp Admin override with a reason.
v	
Sales	3. Decide the quantity change Keep the short balance pending or explicitly cancel it. Prepare the revised bill; an override alone does not approve a quantity change.
v	
Retailer	4. Accept the current amendment Accept the proposed revised bill. Rejection returns the case to Sales for correction or another recheck.
v	
Warehouse	5. Review and confirm finalization After required approvals, finalize quantities, proportional discounts/tax, ledger and dispatch dockets together.

What happens to the balance?

Finding	Recorded outcome
Missing or damaged stock	Hold the affected stock from reuse. Do not create sellable stock from a billing reduction.
Balance kept pending	Create a linked balance draft; it remains part of final-order closure.
Balance cancelled	Keep the cancelled quantity and reason in history.
Prepaid bill reduced	Verify the payment, retain excess as retailer ledger credit, then reconcile the packing financial review.

Final confirmation is required

Warehouse explicitly finalizes the review. Old acceptance buttons and replayed finalization cannot apply an older bill or create duplicate dispatch records.

OPERATING FLOW / 04

At the shop: report, approve, collect

WhatsApp or BConnect: open the assigned stop; use EXCEPTIONS for existing reports.

Delivery agent	1. Open the assigned delivery stop Choose Shop closed or Returned. For returns, select products, quantities and reasons, including Other.
v	
Delivery agent	2. Attach evidence and review Closed shop: visit photo. Returned/damaged stock: photo for every selected product. Edit the draft before confirming.
v	
Delivery agent	3. Confirm and send to seller Submission locks the report. The seller may request a correction, approve the return, or schedule a dated retry for a closed shop.
v	
Seller	4. Review the accepted goods and revised bill Approval immediately updates accepted quantities and the invoice. Pending approval blocks collection against that stop.
v	
Delivery + Collection	5. Collect cash and return system-calculated change Enter rounded cash received against the adjusted outstanding. Return the change shown by the system and confirm. Submit net cash retained for Accounts verification.

Requested addition: rounded cash and change

Change = cash received - amount being paid. Due Rs.870, received Rs.1,000: return Rs.130 and confirm; record Rs.870 as payment and agent-held cash. Change is not credit/refund. Partial payments leave the balance due, with zero change.

The two remaining goods paths

Seller decision	Next path	Case stays open until
Retry a closed shop	Record the next delivery date and carry the goods under assigned custody.	Successful delivery or a completed physical return.
Approve item/full return	Present goods at the warehouse with handover evidence.	Warehouse inspection and financial reconciliation finish.

No waiting for warehouse receipt to amend the collection

Seller approval unlocks the adjusted bill at the shop. A full return has a zero delivery bill. Stock is restored only after the later physical warehouse receipt.

OPERATING FLOW / 05

Return custody & warehouse evidence

Seller approval changes billing. Warehouse Manager confirmation changes physical stock.

Delivery agent	1. Present the goods Upload a warehouse handover photo and confirm presentation. The agent retains custody until Warehouse Manager receipt.
v	
Warehouse Manager	2. Count every returned product Record sellable, damaged and missing quantities against the authorized return. Add receiving/condition photos for every product.
v	
Warehouse Manager	3. Save, review and decide Recount any excess quantity. Record findings and explicitly resolve missing units where applicable.
v	
Warehouse Manager	4. Confirm physical receipt Create linked return records once. Restore sellable stock; block damaged stock. Do not credit the already-amended bill again.
v	
System / Accounts	5. Reconcile the financial status Close the return after receipt and financial checks. Otherwise retain Warehouse Received for collection, verification or refund follow-up.

Stock disposition example

Authorized return: 10	Stock result	Required record
7 sellable	7 units become available.	Receiving count and product photo.
2 damaged	2 units remain blocked.	Condition findings and damage evidence.
1 missing	No stock restoration for the missing unit.	Explicit Warehouse Manager missing-unit decision.

Who can finalize?

The Warehouse Manager must be scoped to the originating warehouse and a WhatsApp-origin order. An Admin role alone does not authorize physical receipt. Non-WhatsApp SOs remain hidden from Warehouse Manager access.

Evidence and final counts are retained with the case. Repeated confirmation cannot restore stock twice. Financial follow-up remains visible to the responsible staff and WhatsApp Admin.

OPERATING FLOW / 06

Credit, later collection & refunds

Money already received is counted once. A pending product quantity is not an amount due today.

A. Verified advance becomes retailer credit

Rs.1,000 paid; final delivered bill Rs.700

Retain **Rs.300** as retailer ledger credit. Automatically apply available credit to the oldest delivered unpaid bill first, then a dispatched bill. A later bill of Rs.500 therefore requires only **Rs.200** additional collection if the full Rs.300 remains available.

Unverified excess cannot be spent. Credit transfers are recorded separately from actual cash/UPI receipts. Pending or booked balance demand receives no allocation. Documented unused credit can remain in the ledger after the original order is completed.

B. Delivered goods with later or partial payment

Sales	Create and own the follow-up A delivered stop with a balance or verification pending stays tracked, even if the rest of the route is unfinished. Default deadline: next day.
V	
Sales / Collector	Assign, schedule and collect Sales can assign an active collector and change the date with a note. Record the actual receipt against the delivered order; overdue cases alert the owner and Admin.
V	
Accounts	Verify the receipt Submitted receipts reduce the amount to collect but do not complete verification. A zero collection balance can still mean verification pending.

C. Refund only when the retailer requests it

Stage	Owner / required action
Request	Record amount and retailer request. Reserve the available credit against further spending.
Approve / reject	Seller records the decision. A requested or approved refund may be cancelled before payout.
Record payout	Accounts records the completed payment reference and evidence. A paid refund cannot be cancelled.
Verify and close	Accounts verifies the payout. Only verified refunds reduce ledger credit; WhatsApp Admin can perform these actions.

Controls: receipt references and refund request keys prevent replay; concurrent credit/refund actions cannot spend the same balance twice. An open refund blocks final completion. Reconciliation problems stay visible for staff action.

OPERATING FLOW / 07

Admin oversight & the closure gate

Use WhatsApp Admin Home for All unresolved cases. Old work stays visible without the normal seven-day order filter.

Who owns the next step?

Role	Operational responsibility
Sales / seller	Retailer confirmation and shortage choices; commercial amendments; return/refund approval; collection ownership.
Purchaser	Purchase approval/cancellation and replenishment. Supplier cancellation never closes retailer demand.
Delivery / collector	Assigned visits, product return reports and photos, custody/handover, and actual collection receipts.
Warehouse Manager	WhatsApp packing and rechecks; return photos, count/condition decisions and physical receipt.
Accounts	Payment verification, refund payout records and refund verification. Credit is reconciled in the retailer ledger.
WhatsApp Admin	All-age case monitoring, owner/deadline/next-action assignment, escalations and permitted overrides.

WhatsApp failure is a tracked branch

Messages enter a persistent retry queue. After five failed attempts, staff can retry later or save a manual follow-up note. Only failed messages show the fallback prompt. A note alone does not resolve delivery: staff must explicitly confirm communication through another channel. Message retry never creates another SO or payment.

Failure-only prompt

WhatsApp delivery failed. Record a manual follow-up note and retry later.

Final completion requires every check

Check	Required outcome
Demand and delivery	Every linked portion is delivered or explicitly cancelled; no unresolved stock, confirmation or packing balance.
Physical goods	Returned goods are received and counted; damaged/missing goods have a recorded disposition.
Money	Delivered bills are settled and verified; credit is documented; no open refund or ledger mismatch.
Communication	Required notifications are sent or explicitly resolved through confirmed manual communication.

Result: Complete only after every check passes; later failures can reopen it. Queue assignment never bypasses closure.
Finance: BConnect Overview/Ledger. Assigned collectors: Overview/Current Delivery.
